

PredicineCARE™

CLIA Validated NGS Assay

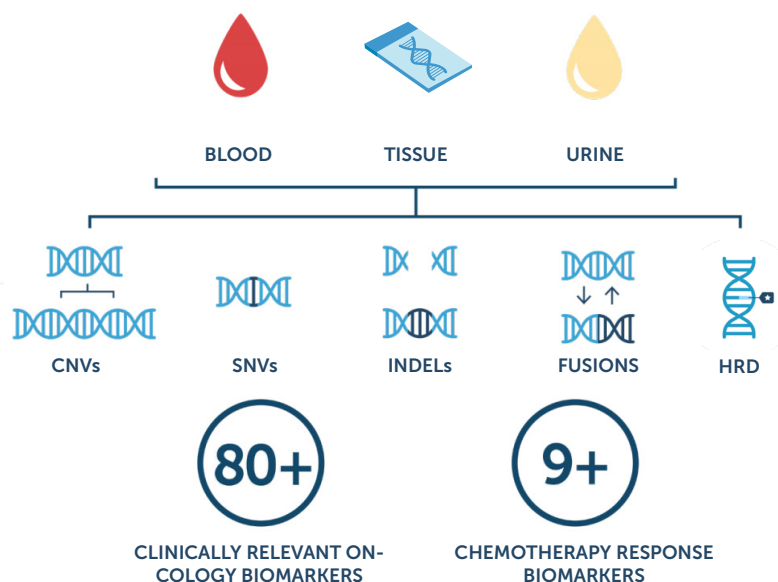

Pan-cancer NGS assay that detects genomic alterations to inform patient care and clinical trials in targeted therapy

152

Key cancer genes interrogated

20,000x

Sequencing Depth (Liquid Biopsy)

Methods and Reporting

- Identifies main classes of genomic alterations: single-nucleotide variants (SNVs), indels, copy number variations (CNVs), fusions, and homologous recombination deficiency (HRD)
- Covers cancer-related genomic alterations relevant for clinical drug development
- Test results are provided in an interpretive report with clinically relevant genomic findings
