88-Gene cfRNA Liquid Biopsy Panel

cfRNA panel for detection of RNA-level fusions and splicing variants

88

Fusion genes and splicing variants interrogated

53 kb

Broad genome coverage

Methods and Reporting

- Identifies RNA-based fusions and splicing variants
- Detects known and novel fusions
- A complementary approach to DNA fusion gene detection
- Uses a proprietary hybrid capture-based NGS methodology combined with in-house proprietary computational algorithms that enable accurate and sensitive detection of cancer variants
- Test results are provided in an interpretive report with clinically relevant genomic findings listed
